

OXIGIN Leichtmetallraeder - OXIGIN 21 Oxflo on Audi Q7

OXIGIN 21 Oxflo: XXL-Lightfoot

The OX21 Oxflo is the latest design from OXIGIN Leichtmetallraeder. Featuring five slightly concave spokes, this wheel is made using the company's innovative Flow-Forming process.

Flow Forming makes it possible to combine low weight with high strength. The reduction in unsprung weight from the former benefits driving dynamics, while the inherently high load capacity makes this a suitable wheel for large SUVs.

In its 11.0x23-inch XXL size for instance, the OX21 Oxflo is a good match for the Audi Q7 3.0 TDI project vehicle of Bochum-based tuner, xXx Performance.

For this show car, the spokes of the 23-inch OX21 Oxflo wheels were finished in liquid turquoise polish to match the protective moulding strip on the flanks of the white Audi. The wheels are wrapped in ultra low profile 305/30ZR23 Yokohama rubber.

An electronic lowering module allows the ride height of the big Audi to be dropped by several centimeters, giving it a much more dynamic look. This more purposeful appearance is underpinned by an adjustable active sound generator, which can even give the normally discreet voice of the 3.0-liter six-cylinder turbodiesel a V8 basso profundo.

For the less adventurous, the OX21 Oxflo is available in basic silver brush and titan brush versions, as well as in six other liquid colour finishes. Other options are shiny or matt finishes, and the glossy polished surface finish shown here. Wheel sizes range from 8.5x19 to 11.0x23-inches.
