PRESS RELEASE - OXIGIN Leichtmetallraeder - OXIGIN MP1 for the BMW M2 (F87)

OXIGIN MP1 meets the BMW M2:
Multi-piece light-alloy wheels for BMW's sportiest compact coupé

With their new MP1 design, OXIGIN celebrates the return of a high quality multi-piece wheel to their varied and innovative alloy wheel range.

A key design feature of the two-piece OXIGIN MP1 is the dynamic angle of its 10 spokes, each of which extends right to the edge of the rim, creating the optical illusion of an even larger diameter wheel. Coupled to a plethora of possible colour finishes, and an attractive price/performance ratio, this wheel will undoubtedly be another winner.

The OXIGIN MP1 is a perfect partner for the BMW M2 chosen by xXx Performance as their latest project car. Sized 9.0J and 10.5Jx20-inch and shod with 245/30R20 and 285/25R20 tyres, the OXIGIN MP1 wheels fill the M2's flared wheel arches perfectly.

With rim beds painted a warm liquid rose gold and wheel stars in liquid anthracite, these sporty and elegant wheels appear to glow in the sunlight. However, this is not for everyone and the less extrovert can order plainer finishes like silver brush / lip polish.

To improve the cars handling and centre the wheels visually in the big arches, xXx Performance fitted adjustable H&R springs.

Meanwhile, an ECU remap for the TwinPower Turbo straight six lifts power from 370 hp to 430 hp, equalling the output of big brother M3. The motor's free-revving ability is further aided by lower backpressure from the Capristo sports exhaust, whose flap control system provides an even more aggressive soundtrack.
